Heuristic Evaluation - HeadCenter, 27/06/2024

Page	Heuristic violated	Severity (1-5)	Description/comment
Home	Recognition rather than recall	1	The label of the "download report" is ambiguous (it seems to refer to a specific report)
Record a full/quick headache flow	Flexibility and efficiency of use	2	Consider offering as default the quick option, and adding the additional steps only if the user requires so (also, the full flow does not contain the "end" information)
Reports download	Flexibility and efficiency of use	2	You could consider asking first the time period, and then which type of reports to download (maybe one could prefer them in a single document)
General comment on navigation	Consistency and standards	3	Consider reviewing the standards of navigation for websites (e.g. do not include explicit back buttons at the bottom, but prefer breadcrumbs navigation)
General comment on page organizations	User control and freedom, Flexibility and efficiency of use	1	Consider testing with users (e.g. in a controlled experiment) how the pages are organized; for example, I felt that coffee/digital recordings could be in one page and that the head aches recording feature gets "lost" when you are not in the home page anymore
